

FIRST SOLVE

New here? Do the walkthrough once at [cubepath-six-vercel/app/learn](#) to learn the basics in the memory jog.

NOTATION

R U F L D B = turn that face clockwise, looking at it from outside the cube

r = counter-clockwise, 2 = half turn. Lowercase r f = that face plus the layer behind it, turning together.

y = spin the whole cube left, white staying down. A whole-cube turn takes nothing.

WORDS

algorithm = a fixed sequence of turns = trigger = a short algorithm your hands run as one unit

1 WHITE CROSS

White center DOWN. Bring the four white edges to it. Each edge's side color must match the center it touches. No algorithm – work it out.

Can't see it? Build the four white edges on the YELLOW face first, each above its matching center, then turn each one down 180 degrees.

2 WHITE CORNERS

Find a white corner on top, turn U until it sits above the empty slot it belongs in, then match a picture below and kick it into place.

white sticker RIGHT

RUR'

white sticker FRONT

L'ULU

white sticker UP

run the first one to knock it out, then look again

RUR'

3 MIDDLE EDGES

Top edge with NO yellow: turn U until its front color matches the center under it. The arrow shows which slot it goes to.

goes RIGHT

U R'UR' y L'ULU

goes LEFT

U' L'ULU y' RUR'U'

Edge stuck in the wrong slot? Run either one to kick it out, then place it.

TWO-LOOK

OLL CROSS - yellow edges

Line bar left-to-right
fRUR'U'f'

Hook hook pointing front-right
fRUR'U'f'

OLL CORNERS - yellow face

Sune $\frac{1}{2}$ yellow, rest clockwise
fRUR'U' R2R'

Anti-Sune $\frac{1}{2}$ yellow, rest counter-clockwise
RU2R' U'RUR'

Pis $\frac{1}{2}$ yellow, headlights left
fRUR'U'f' fRUR'U'f'

OLL CORNERS

Headlights $\frac{3}{4}$ yellow, headlights at the back
R2DR'U2 RD'R'U2R'

2x Headlights $\frac{1}{2}$ yellow, headlights both sides
fRUR'U' RU'R' URU2R'

Chameleon $\frac{3}{4}$ yellow, next to each other
fRUR'U'f' FRF'

Bowtie $\frac{3}{4}$ yellow, diagonal
f'fRUR'U'f' FR

FALLBACK

The badge on each row is your fallback: that many Sunes, with a U turn between, also finishes the case. Machine-checked; there is the worst.

Top not all yellow and nothing matches? Run Sune and read again.

No yellow edge at all? Run the first one, then read again.

ANFUX – BIG CURES AND THE MAP □□□□□□□□

CUBES – 4x4 and 5x5

Isotopes – build the 4 centers – you pair the 12 edges → solve it as a 3x3. Rw = 2 layers wide, 3Rw = 3 layers. 2R = 2nd LAYER ONLY – never waste it.

Last 2 edges

4x4 PLL parity □□□□□□□□

$$\begin{matrix} R'w' & U' & R' & U & R' & F' & R' & F' & R'w \\ 2R'2 & U'2 & 2R'2 & Uw'2 & 2R'2 & 2R'2 & 2R'2 & Uw'2 \end{matrix}$$

slice out, run it, slice back – both cubes
2 edge pairs swapped – half the time

4x4 OLL parity – 1 edge piece flipped – half the time

$$R'w' U'2 \times R'w' U'2 R'w' U'2 R'w' U'2 \quad Lw' U'2 R'w' U'2 R'w' U'2 R'w' U'2 R'w' U'2 R'w' U'2 R'w'$$

5x5 edge parity – 1 edge pair flipped – half the time - one more differs; 5x5 has no PLL parity

$$R'w' U'2 \times R'w' U'2 R'w' U'2 \quad 3R'w' U'2 \quad Lw' U'2 R'w' U'2 R'w' U'2 R'w' U'2 R'w' U'2 R'w' U'2 R'w'$$

The pairs turning the last layer, before OLL and PLL – both parity algorithms now corners.

NOTATION

3 L U L U = turn that face clockwise, from outside the cube. ‘-’ counter-clockwise. 2 = half turn.

3 L U L U = turn that face clockwise, turning the W L turns. x y z = the whole cube, turning the way R. U and F turn. Lowercase r f = that face plus the by the inside it, turning together.

WORDS

algorithm = a fixed sequence of turns - trigger = a short algorithm you hands run as one unit - sexy move = the R U R' U' trigger - edgechase = the R F R' F' trigger, point a case a 3x3 cannot have - edge pair = 2 edges glued into one, on a 4x4 or 5x5
