

Print at 100% / Actual size, SINGLE-sided. Crease along the grey line, fold so both printed faces are outward, glue, then cut. This bar must measure exactly 80 mm.

FIRST SOLVE

New helper! Do the walkthrough once at cubepath-six.vercel.app/answer. This card is the memory jog.

NOTATION
 R U F L D B = turn that face clockwise, looking at from outside the cube.
 r = counter-clockwise, 2 = half turn. Lowercase r f = that face up the layer behind it, turning together.
 y = spin the whole cube left, white staying down. A whole-cube turn solves nothing.

WORDS
algorithm = a fixed sequence of turns = trigger = a short algorithm your hands run on as one unit

1 WHITE CROSS

White center DOWN. Bring the four white edges to it. Each edge's side color must match the center it touches. No algorithm – work it out. Can't see it? Build the four white edges on the YELLOW face first, each above its matching center, then turn each one down 180 degrees.

2 WHITE CORNERS

Find a white corner on top, turn U until it sits above the empty slot it belongs in, then match a picture below and repeat until it drops in.

white sticker RIGHT
R'UR'

white sticker FRONT
L'UL'

white sticker UP turn the first one out to knock it out, then look again
RUR'

3 MIDDLE EDGES

Top edge with NO yellow: turn U until its front color matches the center under it. The arrow shows what slot it goes to

goes RIGHT
U R'UR' y L'UL'

goes LEFT
U' R'UL' y' RUR'

Edge stuck in the wrong slot? Run either one to kick it out, then place it.

FALSEBACK

The badge on each row is your fallback: that many Sunes, with a U turn between, also finishes the case. Machine-checked; three is the worst.

Not just 0 yellow and nothing matches? Run Sune and read again.
