ANNEX — BIG CUBES AND THE MAP
 BIG CUBES 4x4 and 5x5
 Reduce: take the 6 centers → pair the 12 edges → solve it as a 3x3. Rw = 2 layers move. 3Rw = 3 layers. 2R = 2nd LAYER only — never widen it.
 last 2 edges
 4x4 PLL parity $Rw' \quad U2 \quad R' \quad F \quad R' \quad F' \quad Rw \quad U2 \quad R2 \quad Uw2 \quad 2R2 \quad Uw2$ slice out, run it, slice back — both cubes
 2 edge pairs swapped - half the time
 4x4 OLL parity = 1 edge pair flipped - half the time
 $Rw \quad U2 \quad x \quad Rw \quad U2 \quad Rw \quad U' \quad Rw \quad U2 \quad Lw \quad U2 \quad par'w \quad U2 \quad Rw \quad U2 \quad Rw' \quad U2 \quad Rw'$
 3x3 edge parity = 1 edge pair flipped - half the time one move differs: Ux2 last on PLL parity
 $Rw \quad U2 \quad x \quad Rw \quad U2 \quad Rw \quad U2 \quad 3Rw' \quad U2 \quad Lw \quad U2 \quad par'w \quad U2 \quad Rw \quad U2 \quad Rw' \quad U2 \quad Rw'$
 Fix parity during the last layer. Before OLL and PLL — both parity algorithms move corners.
 NOTATION
 R U F L D B x turn that face clockwise, from outside the cube. ' = counter-clockwise, 2 = half turn.
 M = middle slice, turning the way L turns. x y z = the whole cube, turning the way R, U and F turn. Lowercase f = that face plus the layer behind it, turning together.
 WORDS
 algorithm = a fixed sequence of turns - trigger = a short algorithm your hands run as one unit - sexy move = the R U R' U' trigger -
 ■ R U R' U' sexy move ■ R U R' U' Sexy ■ R' F R' F' slicehammer gap = change grip

[illegible]
