

Print at 100% / Actual size, SINGLE-sided. Crease along the grey line, fold so both printed faces are outward, glue, then cut. This bar must measure exactly 80 mm.

FIRST SOLVE

New hero! Do the walkthrough once on cubepath-six.vercel.app/learn here! This is the memory jog.

NOTATION

R U F L D B = turn that face clockwise, looking at it from outside the cube.
 = counter-clockwise 2 = half turn. Lowercase **r f l d b** = that face plus the layer behind it, turning together.
y = spin the whole cube left, white staying down. A whole-cube turn solves nothing.

WORDS

algorithm = a fixed sequence of turns - trigger = a short algorithm your hands run as one unit

1 WHITE CROSS

White turn DOWN. Bring the four white edges to it. Each edge's side color must match the center it touches. No algorithm – work it out.
 Can't see it? Build the four white edges on the YELLOW face first, each above its matching center, then turn each one down 180 degrees.

2 WHITE CORNERS

Find a white corner on top, turn U until it sits above the empty slot it belongs in, then match a picture below and repeat until it drops in.

white sticker RIGHT
RUR'U'

white sticker FRONT
L'L'U

white sticker UP run the first one once to knock it out, then look again
RUR'U'

3 MIDDLE EDGES

Top edge with NO yellow: turn U until its front color matches the center under it. The arrow shows which slot it goes to.

goes RIGHT
U' RUR' y L'L'U

goes LEFT
U' L'L'U y' RUR'U'

Edge slot in the wrong slot? Run either one to kick it out, then place it.

The diagram illustrates the sequence of moves to solve a 3x3x3 Rubik's cube. It starts with a solved cube and proceeds through 11 steps, each showing a different cube state and the move(s) performed. The moves are: 1. R (Right face clockwise), 2. R' (Right face counter-clockwise), 3. R' (Right face counter-clockwise), 4. R' (Right face counter-clockwise), 5. R' (Right face counter-clockwise), 6. R' (Right face counter-clockwise), 7. R' (Right face counter-clockwise), 8. R' (Right face counter-clockwise), 9. R' (Right face counter-clockwise), 10. R' (Right face counter-clockwise), 11. R' (Right face counter-clockwise). The final state is a solved cube.
