

Print at 100% / Actual size, SINGLE-sided. Crease along the grey line, fold so both printed faces are outward, glue, then cut. This bar must measure exactly 80 mm.

The diagram illustrates the evolution of a 2D hexagonal lattice from a single corner swap to a full diagonal swap. It is divided into two main sections: 'CORNER SWAP' on the left and 'DIAGONAL SWAP' on the right. The lattice is composed of hexagons, and the swaps are represented by colored arrows and text labels.

CORNER SWAP:

- 1. A single corner swap (RUR) is performed on a single hexagon.
- 2. The swap propagates to the right, creating a larger region of swapped hexagons.
- 3. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 4. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 5. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 6. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 7. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 8. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 9. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 10. The swap propagates further to the right, creating a larger region of swapped hexagons.

DIAGONAL SWAP:

- 1. A single diagonal swap (RURUR) is performed on a single hexagon.
- 2. The swap propagates to the right, creating a larger region of swapped hexagons.
- 3. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 4. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 5. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 6. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 7. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 8. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 9. The swap propagates further to the right, creating a larger region of swapped hexagons.
- 10. The swap propagates further to the right, creating a larger region of swapped hexagons.
