

Print at 100% / Actual size, SINGLE-sided. Crease along the grey line, fold so both printed faces are outward, glue, then cut. This bar must measure exactly 80 mm.

[illegible]

### FIRST SOLVE

New here? Do the walk through once at [cubepath3.sixvercel.app/](http://cubepath3.sixvercel.app/). This card is the memory jog.

**NOTATION**

**R U F L B** = turn that face clockwise, looking at from outside the cube.

**r** = counter-clockwise, **2** = half turn. Lowercase **r f** = that face plus the layer behind it, turning together.

**y** = spin the whole cube left, while staying down. A whole-cube turn solves nothing.

**WORDS**

**algorithm** = a fixed sequence of turns - trigger = a short algorithm you hands run as one unit

#### 1 WHITE CROSS

White center DOWN. Bring the four white edges to it. Each edge's side color must match the center it touches. No algorithm – work it out.

Can't see it? Build the four white edges on the YELLOW face first, each above its matching center, then turn each one down 180 degrees.

### 2 WHITE CORNERS

Find a white corner on top. Turn U until it sits above the empty slot it belongs in, then match a picture below and repeat until it drops in.

**white sticker RIGHT**  
**R'U'R**

**white sticker FRONT**  
**L'U'L**

**white sticker UP** run the first one once to knock it out, then look again  
**R'U'R**

#### 3 MIDDLE EDGES

Top edge with NO yellow: turn U until its front color matches the center inside it. The arrow shows which slot it goes to.

**goes RIGHT**  
**U R'UR' y L'U'L**

**goes LEFT**  
**U L'U'L U y' R'UR'**

Edge stuck in the wrong slot? Run either one to kick it out, then place it.
