ANNEX – BIG CUBES AND THE MAP GOO A A

BIG CUBES 4x4 and 5x5

Reduce, build the 6 centers → pair the 12 edges → solve it as 3x3. Rw = 2 layers wide. 3Rw = 2Rnd LAYER ONLY – never widen it.

last 2 edges

4x4 PLL parity

4x4 OLL parity – 1 edge pair flipped - half the time

5x5 edge parity – 1 edge pair flipped - half the time

5x5 parity $Rw\ U2\ x\ Rw\ U2\ x\ Rw\ U2\ Rw'$ – 1 edge pair flipped - half the time - one U2 differs, 5x5 has no PLL parity

Flippiness during the last layer before OLL and PLL – both parity algorithms move corners

NOTATION

Each letter turn that face clockwise, seen from outside the cube – so then you see its left U and B look counter-clockwise → counter-clockwise = 2 half turn.

M – middle slice, turning the way L turns. $x\ y\ z =$ the whole cube, turning the way R/U/B turn. Lowercase f = that face plus the layer behind it, turning together.

WORDS

algorithm = a fixed sequence of turns - trigger = a short algorithm your hands run as one unit - sexy move = the R U R' U' trigger - the R' F R' F' trigger - parity = a case a 3x3 cannot have edge pair = two edges glued into one, on a 4x4 or 5x5

RUU sexy move **RUUU** Sune **R'F'F'** sledgehammer gap = change grip
