## HOW TO LOOK

1. Count the headlight faces. One = front of this card. Four = this column. None = the column on the right.
2. Only then read the edges to pick the exact case.
3. Line the case up as drawn, run it, turn the top again to finish — that last free turn is the AUF.

• = already yours from Card 2.

## WORDS

PLL = slide the top pieces home · headlights = two matching corners on one face · AUF = the free top turn that lines a case up · adjacent corner swap = the swapping corners share an edge · diagonal corner swap = the swapping corners sit opposite

## STUCK?

Case you have not learned? Two-look it from Card 2 — T-Perm then Ub still solves it. Nothing here can strand you. Beaten five times by one case? Park it, two-look it, come back next week.

Card 2 gives you 19/72 last layers in one look. This card gives 71/72.

Next: the other 57 top-face cases, and the first two layers solved as pairs — drilled with a cube in the app: [cubepath-six.vercel.app/practice](https://cubepath-six.vercel.app/practice)

DONE — all twenty-one named correctly, twenty-one in a row, no card in hand, on two separate days. □ MASTER: PLL under 3 s, solves under 0:30. My target: \_\_\_\_\_
