BIG CUBES

4x4 and 5x5
Reduce, build the 6 centers –> pair the 12 edges –> solve it as a 3x3. Row = 2 layers wide. 3Row = 3 layers. 2R = 2nd LAYER ONLY – never widen it.

last 2 edges

4x4 PLL parity

$Rw' U' R' U' R' F R' F' Rw'$ slice out, run it, slice back – both cubes
 $2R2 U2 2R2 U2w2 2R2 U2w2$ 2 edge pairs swapped - half the time

4x4 PLL parity – 1 edge pair flipped - half the time

$Rw U2 x Rw U2 Rw U2 Rw' U2 Lw U2 Rw' U2$ slice out, run it, slice back – both cubes
 5x5 edge parity – 1 edge pair swapped - half the time, one edge is different, 5x5 is more complicated

$Rw U2 x Rw U2 Rw U2 Rw' U2 Lw U2 Rw' U2$ slice out, run it, slice back – both cubes
 5x5 parity – 1 edge pair swapped - half the time, one edge is different, 5x5 is more complicated

Fix parity during the last layer, before ULL and PLL – both parity algorithms move corners.

NOTATION

Each letter turns that face clockwise, seen from outside the cube – so from your seat L and B look counter-clockwise –> counter-clockwise, 2 = half turn.

M = middle slice, turning the way L turns. x = turn the whole cube, turning the way R/U/V and I turn. Lowercase f = that face plus the layer behind it, turning together.
